

Tripwire

Continuous Compliance across the Data Center

KEY BENEFITS

Together, BMC and Tripwire:

- > Enable you to achieve continuous regulatory, operational, and security compliance
- > Increase the value of your BSM investment and reduce operational costs
- > Ensure data integrity for the BMC Atrium CMDB and the data center

BMC AND TRIPWIRE: PARTNERING FOR SUCCESS

BMC and Tripwire provide infrastructure, operational, and service support solutions with the unparalleled ability to reduce both costs and risk with increased control over the IT environment. Together, BMC and Tripwire help IT drive business value through the most comprehensive, targeted solution in the industry.

Tripwire extends the value of BMC's industry-leading Business Service Management (BSM) solutions — including the BMC Atrium Configuration Management Database (CMDB), BMC Desktop Configuration Automation, BMC Server Configuration Automation, BMC Change Process Management, and BMC Incident and Problem Process Management — to control and reduce the cost of IT.

ACHIEVE CONTINUOUS COMPLIANCE AND MITIGATE RISK

BMC and Tripwire integrate compliance initiatives into the day-to-day operations of the IT department. Tripwire complements BMC solutions by providing a comprehensive, holistic view of configuration changes to ensure that processes are followed and changes that could negatively impact the business are addressed. BMC and Tripwire provide a market-leading solution with strong competitive differentiation.

By working with both BMC and Tripwire, you can:

- » Help develop a sustainable compliance capability that is integrated into the day-to-day operations of the IT department
- » Prove that all configuration changes are known, documented, and investigated
- » Ensure that trusted systems have not been compromised
- » Lower the cost of compliance through automation
- » Deliver actionable, out-of-the-box compliance assessment reports, including standardized compliance reporting and historical compliance state over time

INCREASE THE VALUE OF YOUR BSM INVESTMENT AND REDUCE OPERATIONAL COSTS

BMC, the leader in BSM, and Tripwire, the leader in configuration audit and control solutions, together have the necessary tools essential for operational compliance and IT Infrastructure Library (ITIL®) implementation. Tripwire's certified integration with BMC Remedy applications reduces circumvention of the change process, leading to an improvement in IT governance and reducing unplanned work. Also, Tripwire and BMC Configuration Manager (formerly Marimba) deliver increased accountability and control over the unauthorized changes that increase risk and decrease operational efficiencies by automating and tracking changes across the data center — no matter the source.

By working with both BMC and Tripwire, you can:

- » Optimize IT processes through the automation of configuration control capabilities (integrated with change and configuration management solutions from BMC)
- » Increase visibility and control of the entire change and configuration management process through Tripwire's integrated approach to configuration audit and control
- » Deliver assurance that all unauthorized changes made outside of tools and processes are detected and analyzed
- » Ensure changes are detected and controlled for servers, databases, network devices, virtualization, applications, middleware, and active directories

VERIFY, VALIDATE, AND ENSURE DATA INTEGRITY

BMC and Tripwire proactively control and enforce out-of-process changes that may cause quality-of-service, compliance, and security problems. The combination of BMC and Tripwire ensures data integrity and also prevents configuration drift of the configuration items (CIs) that the BMC Atrium CMDB manages. BMC and Tripwire's certified, integrated approach ensures the integrity of the data being added to the BMC Atrium CMDB by synchronizing with change and configuration management processes, thus accelerating the time to value of your BMC Atrium CMDB investment. This approach also increases the trustworthiness of the BMC Atrium CMDB to ensure that it delivers continuous business value.

By working with both BMC and Tripwire, you can:

- » Accelerate your CMDB success by ensuring all configuration activities are authorized, compliant with policy, and accurate
- » Halt 'configuration drift' and ensure accuracy of data before, during, and after your BMC Atrium CMDB implementation
- » Provide policy-based, proactive management to actively prevent variances from approved configurations
- » Deliver critical business value by verifying, validating, and ensuring data integrity, as well as by providing configuration activity granularity to the available BMC Atrium CMDB data

ABOUT TRIPWIRE

Tripwire, Inc. is the recognized leader of configuration audit and control solutions, serving nearly 6,000 enterprises worldwide. Tripwire enables IT to control risk and increase operational efficiency through its advanced configuration audit and control solutions that assess, validate, detect, and enforce configuration changes across the data center. Global enterprises rely on Tripwire to strengthen their compliance and security, reduce unplanned work, increase availability, and accelerate success with CMDB initiatives. Visit www.tripwire.com for more information.

ABOUT BMC

BMC Software delivers the solutions IT needs to increase business value through better management of technology and IT processes. Our industry-leading Business Service Management solutions help you reduce cost, lower risk of business disruption, and benefit from an IT infrastructure built to support business growth and flexibility. Known for enterprise solutions that span mainframe, distributed systems, and end-user devices, BMC also delivers solutions that address the unique challenges of the midsized business. Founded in 1980, BMC has offices worldwide and fiscal 2007 revenues of \$1.58 billion. Activate your business with the power of IT.
